

SECURITY ASSESSMENT REPORT

Automated Incident Response & Vulnerability Scan Analysis

Target IP Address: 192.168.10.10

Scan Timestamp: 2026-09-17T23:07:19Z

Report Generated: 2026-09-17 23:07:35 UTC

OVERALL THREAT RISK LEVEL

LOW

1. Executive Summary & AI Analysis

SUMMARY

A quick check of the computer at address 192.168.10.10 showed no listening services, no known software flaws, and no signs of common attack methods. In short, the scan didn't find anything that looks risky.

RISK LEVEL

This appears safe for now.

TOP CONCERNS

- Nothing was discovered, but a clean result today doesn't guarantee the device will stay that way.
- Some services can be hidden or disabled, so they might not show up in a basic scan.
- Future changes to the network or software could introduce new issues.

WHAT TO DO

- Keep the device's security software up to date and run regular scans.
- Make sure a firewall is active to block unwanted traffic.
- Review the device's settings periodically to confirm no new services have been opened.

2. Open Ports & Detected Services

No open ports were detected during this scan.

3. Discovered Vulnerabilities (CVEs)

No known CVE findings were identified for the target.

4. MITRE ATT&CK; Mappings

No MITRE ATT&CK; technique mappings available.

5. Immediate Remediation & Hardening

- **Patch & Update Software:** Immediately apply vendor security updates for all identified outdated services and libraries.

- **Enforce Strict Firewall Policies:** Restrict inbound network access to essential ports only; block unused open ports.
- **Implement Strong Authentication:** Enforce multi-factor authentication (MFA) and disable password-based SSH authentication in favor of key pairs.
- **Continuous Monitoring & Auditing:** Enable continuous log monitoring, intrusion detection systems (IDS), and regular automated vulnerability assessment.
